

Simulator development

SILS

Automobile-related

Hardware virtualization

Greatly contributes to development efficiency by virtualizing and building the actual machine environment

Features

Simulink simulation and linkages

Sample of client requests

- ▶ We have built the simulation environment for the software on the controller software, but since we are unable to simulate the hardware portion (Circuits, load, etc.), it is not very accurate

Solutions offered by NDR

- ▶ Can develop software to simulate the hardware portion, and thereby improve the simulation accuracy
- ▶ Can further improve the accuracy by also developing software to simulate the I/O boards in the plant
